Sivoia QED™— Quiet Electronic Drive shades and draperies

the components of an 8 series system communicate with each other over a dedicated network of low-voltage wires.

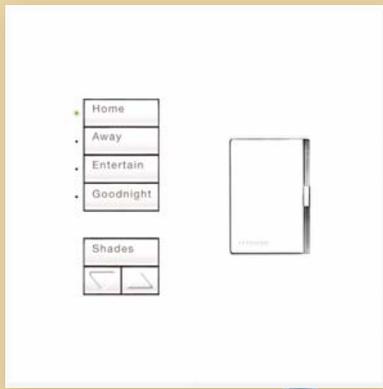

HomeWorks® gives you convenient, intelligent, and sophisticated control of your home's interior and exterior lighting. Daylight can also be controlled by integrating HomeWorks with Sivoia QED—Quiet Electronic Drive shades and draperies. The 8 series is designed for homes being constructed or undergoing major renovations.

8 series | components

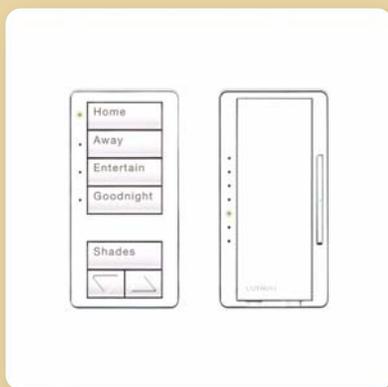

A HomeWorks® system consists of many components that work in unison, providing total home lighting control that is completely customized to suit your home and your lifestyle. As the premiere series for the HomeWorks total home lighting control system, the 8 series features the widest selection of control styles and finishes to complement and enhance the elegance of your luxury home.

The 8 series works as a stand-alone system or in combination with the HomeWorks wireless series allowing the system to be expanded at any time.

the architectural style is defined by beveled edges and precise corners on the wallplates. Architectural-style controls are available in 7 matte plastic and 11 metal finishes or, for that perfect finishing touch, we can custom match a color or finish of your choice.

the designer style is characterized by rounded corners and a designer opening wallplate. Other products such as audio controls often use the same designer opening, creating a harmonious look on the wall. Designer-style controls are available in 7 gloss and 12 Satin Colors™ finishes.

This product guide has been organized into architectural-style and designer-style sections. To ensure color matching and consistency in style, all products should be selected from one section or the other.

master keypads are customized to provide control of the system from convenient locations throughout your home. Typical keypad locations include entrances, the master bedroom, and main hallways and rooms. Every button on a master keypad is uniquely programmed for your personal needs. Custom engraving is added to clearly identify each button's function.

Signature Series™

Architrave™

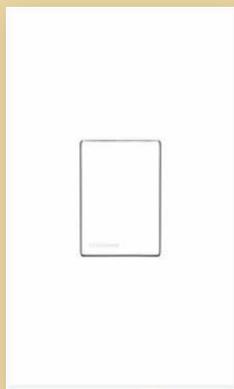

LED indicator lights on each master keypad provide status feedback for the lights and shades throughout your home. They also illuminate very softly so that the keypad is easy to find in a darkened room. The seeTouch and Signature Series keypads also include backlit buttons that are easy to read in a darkened room.

8 series | dimmers and switches

in-wall switch

dimmers and switches are connected to the lights in your home. They are used in place of standard light switches and provide simple, intuitive operation. Their intelligence allows local control as well as remote control from any of the master keypads.

GRAFIK Eye® lighting control

GRAFIK Eye lighting controls connect to several lights in a single room and are used in place of multiple switches. Light levels for the different activities that take place in a room can be programmed with a few button presses underneath the front cover. Ideal for home theaters, the control includes an infrared receiver so that the lights can be controlled by handheld remotes.

remote dimming panels are often used instead of multiple dimmers and switches for rooms that have several lights. By installing a master keypad in the room and connecting the lights to a remote dimming panel, large groups of dimmers and switches can be avoided, ensuring a cleaner, less cluttered appearance on the wall. Remote dimming panels are typically located in equipment rooms or utility closets.

8 series | system controls and accessories

processor

system controls, though unseen and unheard, play key roles in the HomeWorks® system. The processor is the heart of the system and provides the intelligence for automating lights at different times of the day. It even adjusts automatically for the changing sunrise and sunset time each day. The processor has special modes for your home when you go on vacation or when the security system is tripped. The processor can also allow your lighting and shades to be integrated with automation systems, AV systems, and touch screen systems.

by combining wireless series products with an 8 series system, you can have convenient control from your bedside, end tables, coffee tables, and even your car. Table and floor lamps can also be added to the system.
